

**Case History 1033** - Automotive Industry**ZBG Zerspanungstechnik Bruck GmbH**

In the exceedingly competitive market of automotive engineering, ZBG Machining have established an outstanding reputation. As part of the wider Schabmüller Group, ZBG Zerspanungstechnik Bruck GmbH are one of Germany's main Automotive Suppliers.

Formulated in 1994, the Company has grown substantially, establishing a status in the top 50 of Germany's Bavarian region and Europe's top Automotive 500.

With solid foundations, an early Company ethos and principles of 'high performance, quality and flexibility' there was a requirement for 'ultimate' precision engineering from the beginning.

As recalled by **ZBG's Operations Manager, Mr Jürgen Bindl ...**

*"In those early years, as part of ZBG at that time, we already had several Nikken rotary tables on our machines, together with machinery from other suppliers. When it came to 'accuracy and reliability' the choice each time proved to be NIKKEN."*

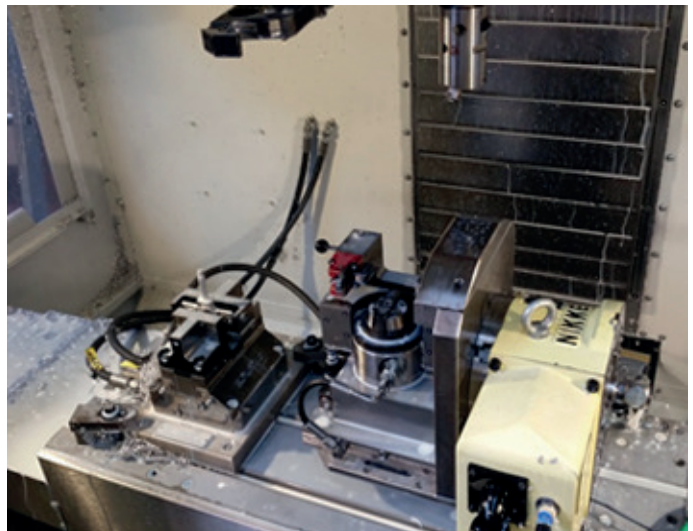

**Mr Bindl today comments ...**

*"With the demand of 24 hour operations in ZBG's manufacturing process, the long-term relationship and the investment of NIKKEN Rotary Tables, ZBG components are of 'high precision and within tolerance' every time.*

*Due to those principles, the choice of Rotary Tables in the Company's early years was NIKKEN and this remains so today."*
